

MERCURY AND FEBO HOME LIFTS

CMA Home Lifts point to the sky.

Quality of life and well-being of people first.

CMAlifts was inspired by this simple consideration to realize its lifting platforms. They are simple and definitive solutions to overcome existing differences in level and architectural barriers in a house. Choose with confidence between our two creations: FEBO, our 100% electric platform, and MERCURY, our traditional hydraulic platform, relying on a company who has long cared about their users.

Overcoming any installation constraints with a traditional elevator is now possible thanks to CMAlifts products which are renowned for their safety, flexibility, minimum encumbrance and low energy consumption. Our quality is certified by the most severe international standards.

Our platforms comply with the latest Machinery Directive 2006/42/EC, and hold the EU Declaration of Conformity issued by IMQ Italia.

Our creations are high VALUE to your home.

Other existing platforms, on the market, consume energy even when motionless, absorbing up to **75-80%** of their annual consumption.

Our FEBO ENERGY platform, with system integrated batteries, consumes a maximum of 0.2kW when in motion. Currently available with a rated speed feature of 0.15m/s.

Our FEBO platform without batteries consumes a maximum of 0.5kW. This model is characterized by a lower purchasing cost and minimal maintenance.

Our MERCURY hydraulic platform consumes approximately 1.8kW (0.15m/s speed - 330kg load capacity)* being the reliable and traditional solution par excellence.

*Available with a rated speed feature of 0.30m/s (NON EC).

FEBO 230V

Our FEBO platform uses the existing electrical system of your building and consumes up to 0.5kW in motion (for rated speed of 0.30m/s - NON EC - rated power of 0.9 kW)

FEBO ENERGY

With system integrated batteries, it consumes up to 0.2kW in motion. Currently available with a rated speed feature of 0.15m/s.

ENERGY SAVING

A system that reduces energy consumption to practically zero when the platform is motionless at a landing, also thanks to the lighting timer which switches off the lights reducing furthermore the platform energy consumption.

Lights switch on automatically when calling the lift.

SMART CHECK

On all FEBO platforms, "Smart Check" is an intelligent monitoring system which checks and prevents potential battery failure. Furthermore, in the event of a blackout, the platform continues to operate thanks to its energy autonomy.

COMFORT AND SAFETY

Travel comfortably and safely

BLOCK SECURITY

A system that works together with the anti-theft system installed in the building which blocks the platform at the floor in case of a break-in.

REMOTE CONTROL

It allows to control and operate the machine through a simple SMS. For example, it is possible to receive real-time communications in the event of a fault and, accordingly, unblock the plant from a remote location.

It is also possible to pre-set the parking of the platform at specific times of the day so that the user can have the machine ready at the desired landing and desired time of the day.

PASSENGER SAFETY

Automatic transport to specific landing in case of black-out or electrical faults (not concerning safety circuits). PASSENGER SAFETY also ensures the opening of the landing doors and guarantees an incomparable travel comfort without jolts or turbulences.

1

2

Only for **FEBO** platform: uncontrolled movement monitoring system.

3

High stop precision at landing level.

4

Only “Gearless” engine **FEBO** platforms are guarantee of robustness and reliability.

5

Reduced maintenance thanks to a proven technology system and robustness of its components.

6

Landing signal of “busy”, “lift arrival” and “floor level”.

7

Travel comfort thanks to its silence feature and stop precision.

8

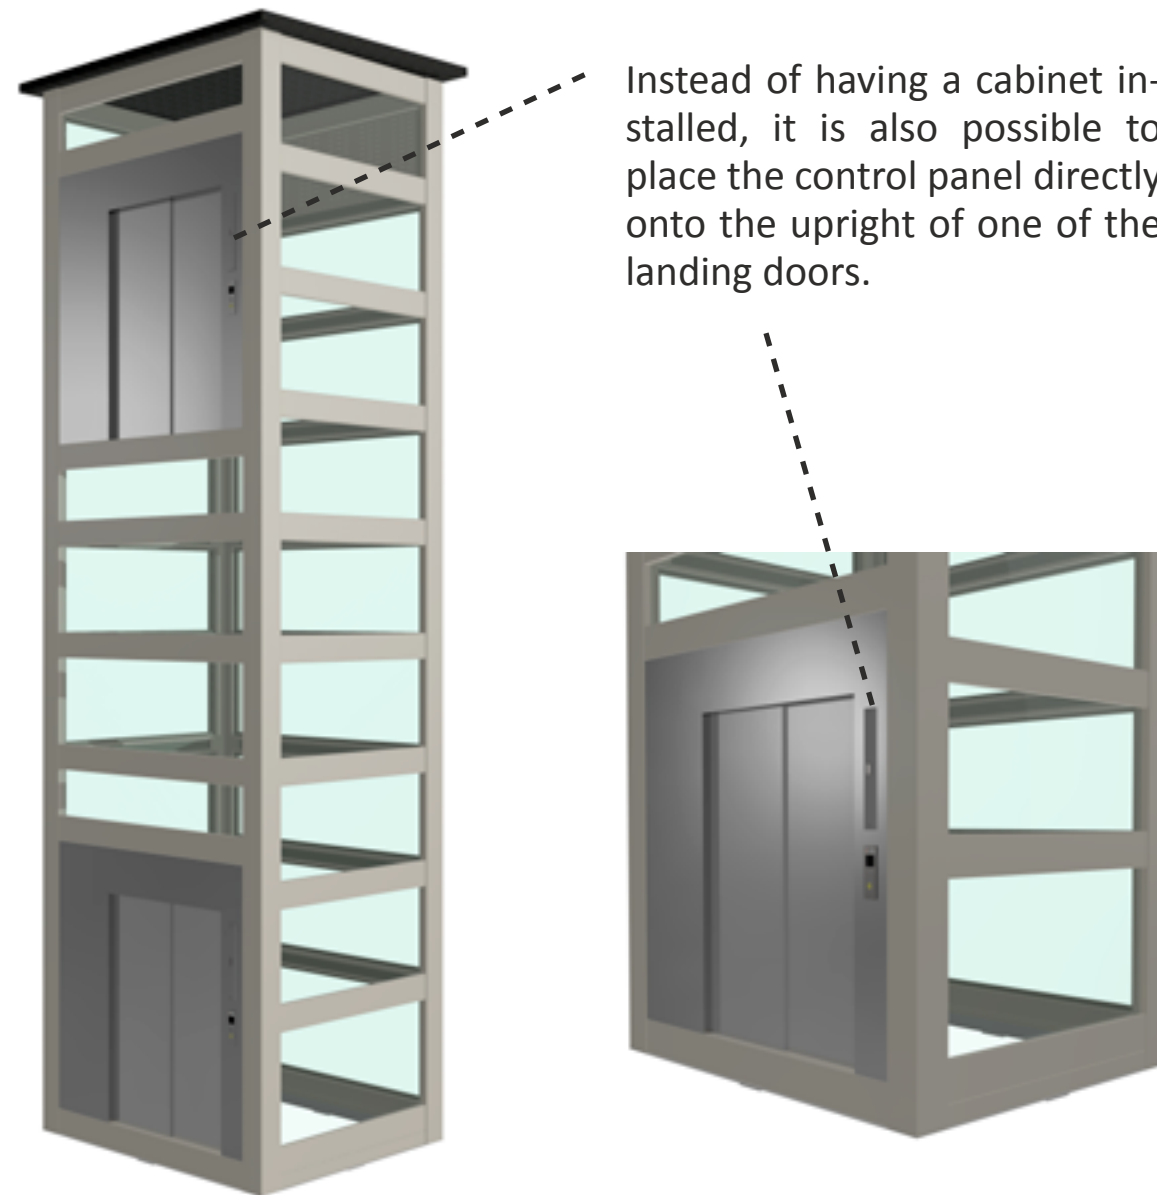

In the event of battery failure, **FEBO** platforms continue operating normally with electrical power.

SAFETY

An all inclusive feature of our products, since safety is not an option!

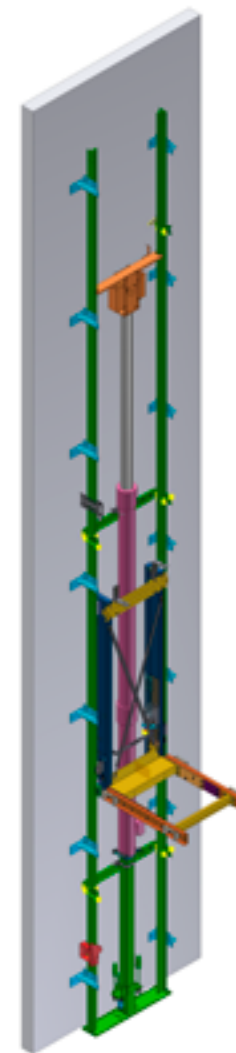

WHAT PRODUCT TO CHOOSE? FEBO OR MERCURY?

System changes, same quality

WHEN FEBO? If you require extreme comfort and silence. With its electric drive, FEBO is the leading cutting-edge technology available on the market. This choice is entirely environmentally friendly since the system does not work on oil, and the energy consumption is particularly low. In addition, it does not require a machine room. Optionally, the control panel can be placed directly on top of one of the landing door uprights, thus eliminating the cabinet.

WHEN MERCURY? If there is sufficient room in your building to hold a hydraulic power pack unit control cabinet. Thanks to its hydraulic drive, MERCURY requires minimal maintenance. Furthermore, it is easy to install and is the ideal solution to overcome smaller level differences.

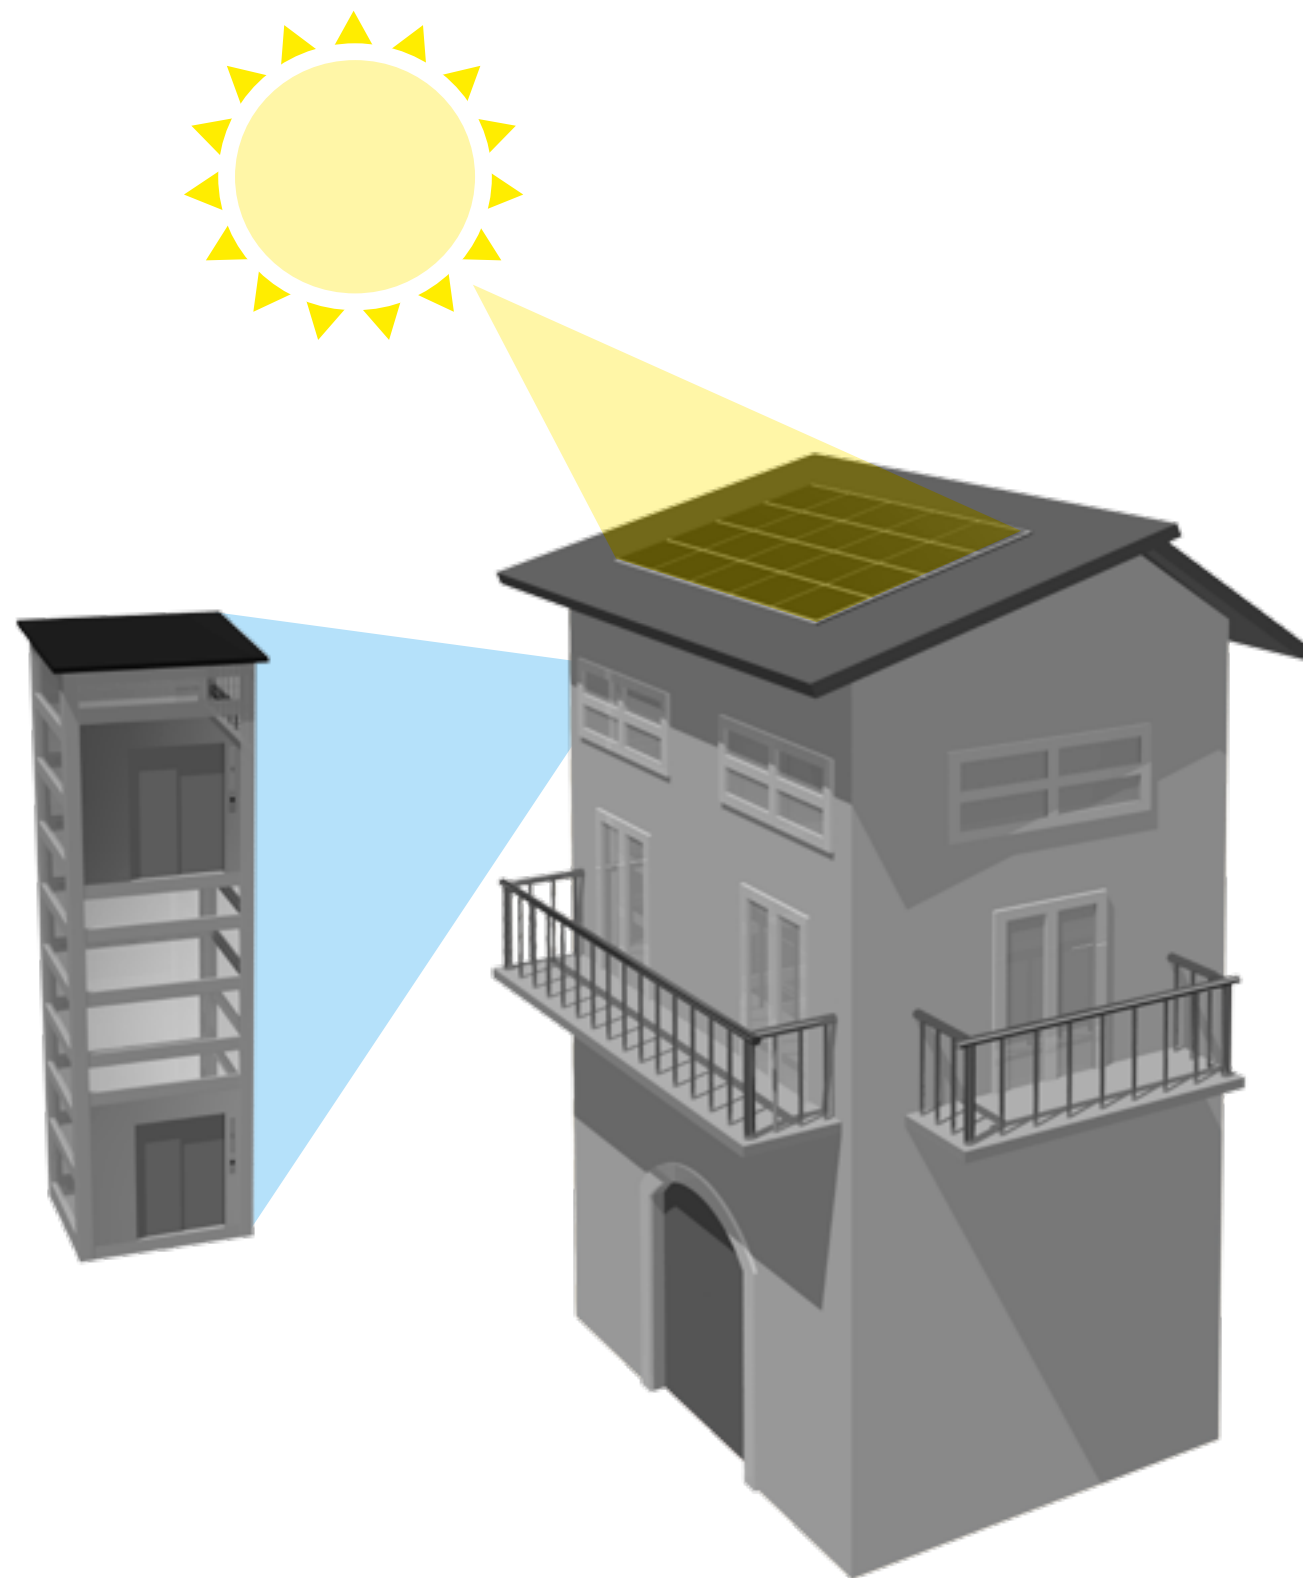

MERCURY hydraulic drive, with load capacity up to 1000kg and speed of 0.15 m/s

FEBO “Hybrid”

Save power with the sunlight.

CMAlifts features a truly innovative product: **FEBO Hybrid**, a lift platform inspired by hybrid technology that uses solar power, thanks to photovoltaic panels, and more.

During certain phases, such as the slowing down of the lift, the plant, actually, generates electricity from the car movement, that is to say, its own motion recharges the platform.

This way, the system, coupled with solar panel technology, consumes as little as 0.5 to 0kW (in optimal operating conditions). Currently available with a rated speed feature of 0.15m/s.

FEBO Hybrid responds to a specific “must” in the field of domestic elevators: optimizing energy consumption by reducing costs. Thanks to the use of renewable energy.

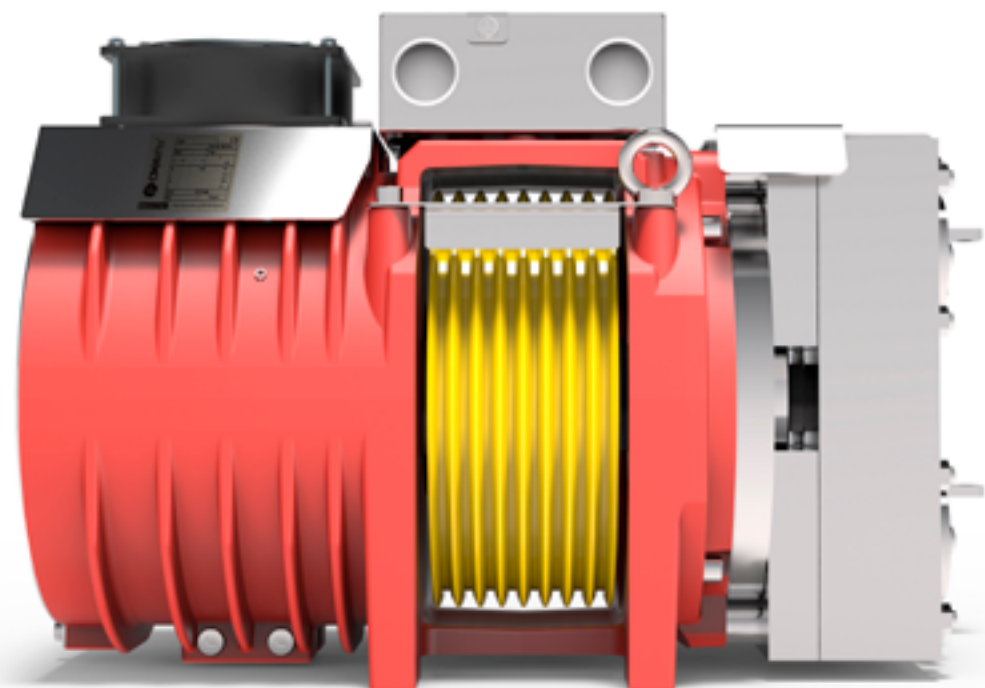

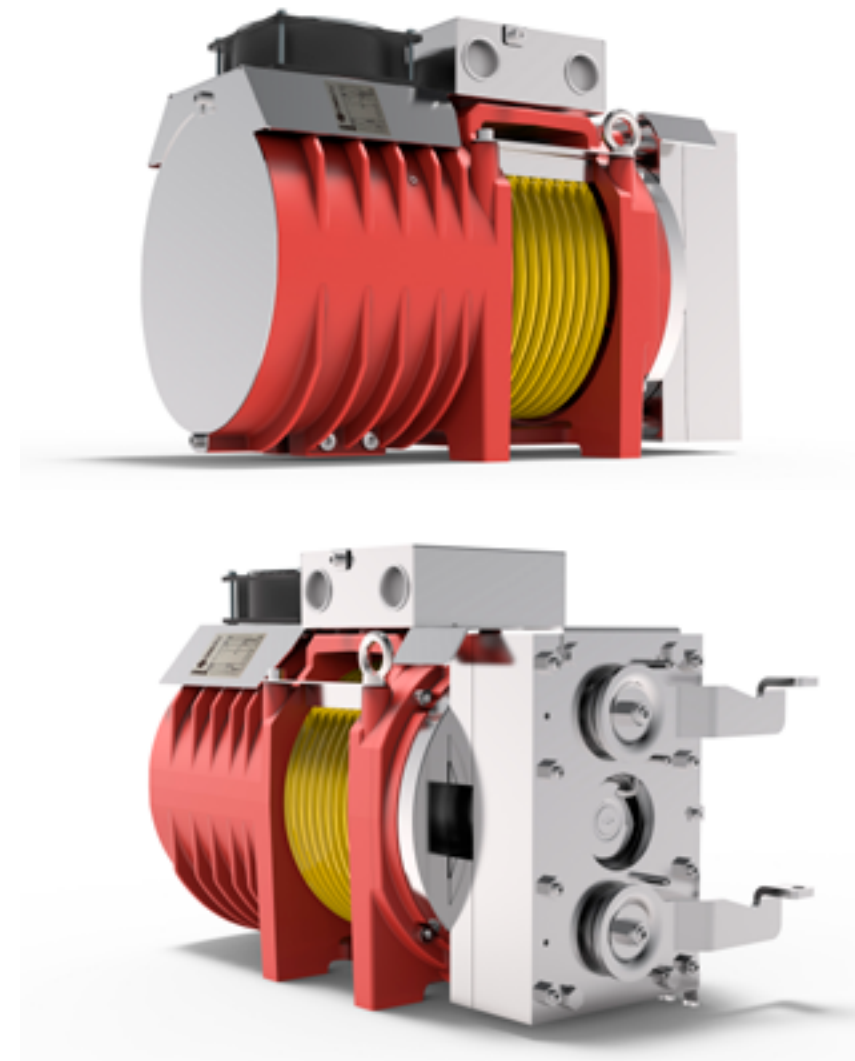

FEBO Hybrid complies with the new Machinery Directive 2006/42/EC. It is available for load capacities up to 400kg with single, double or triple access, in the versions with automatic sliding doors or semi-automatic doors, automatic bus-folding cabin doors and manual hinged landing doors.

PRODUCT FEATURES

- Lower energy consumption
 - Versatile
 - Tailor-made
 - Easy to install
- Greater convenience

FEBO'S BEATING HEART

FEBO's beating heart is the synchronous Gearless motor with SGS4 permanent magnets: a true "muscle" technology specifically designed for this type of solution. It is renowned for its high performance and supreme resistance, which makes it possible to reduce the frequency of platform maintenance. Supreme resistance, quietness and close-to-zero vibrations. The whole lot with a compact design and smaller sizes.

TECHNICAL FEATURES:

- Nominal load capacity in roping 2:1 - 400kg
- Nominal Power: 0.5kW - Speed: 0.15m/s*
- Power supply: 230V 50Hz single phase
- Static load: 19.6kN - 2000kg
- Standard cooling system: 16W @ 230V 50Hz
- Dimensions: 232x464x322
- Weight: 95kg

*Nominal Power 0,9kW - speed: 0,30m/s NO CE

SAVE WITH US

The tax breaks granted for the purchase of our platforms are the best investment for the future.

For example, the Italian government provides tax relief and contributions for the elimination of architectural barriers, according to Law n. 13/1989: VAT reduced to 4%, deduction of income tax of 19% on expenses incurred.

YOU DESIGN!

FEBO and MERCURY are 100% customizable in terms of design, materials and colours. All our solutions are made with quality elements and finishes that render the platform a unique high-tech jewel, specifically forged for your home. Our wide range of options allows customers to be able to match their design ideas with products in line with their building requirements.

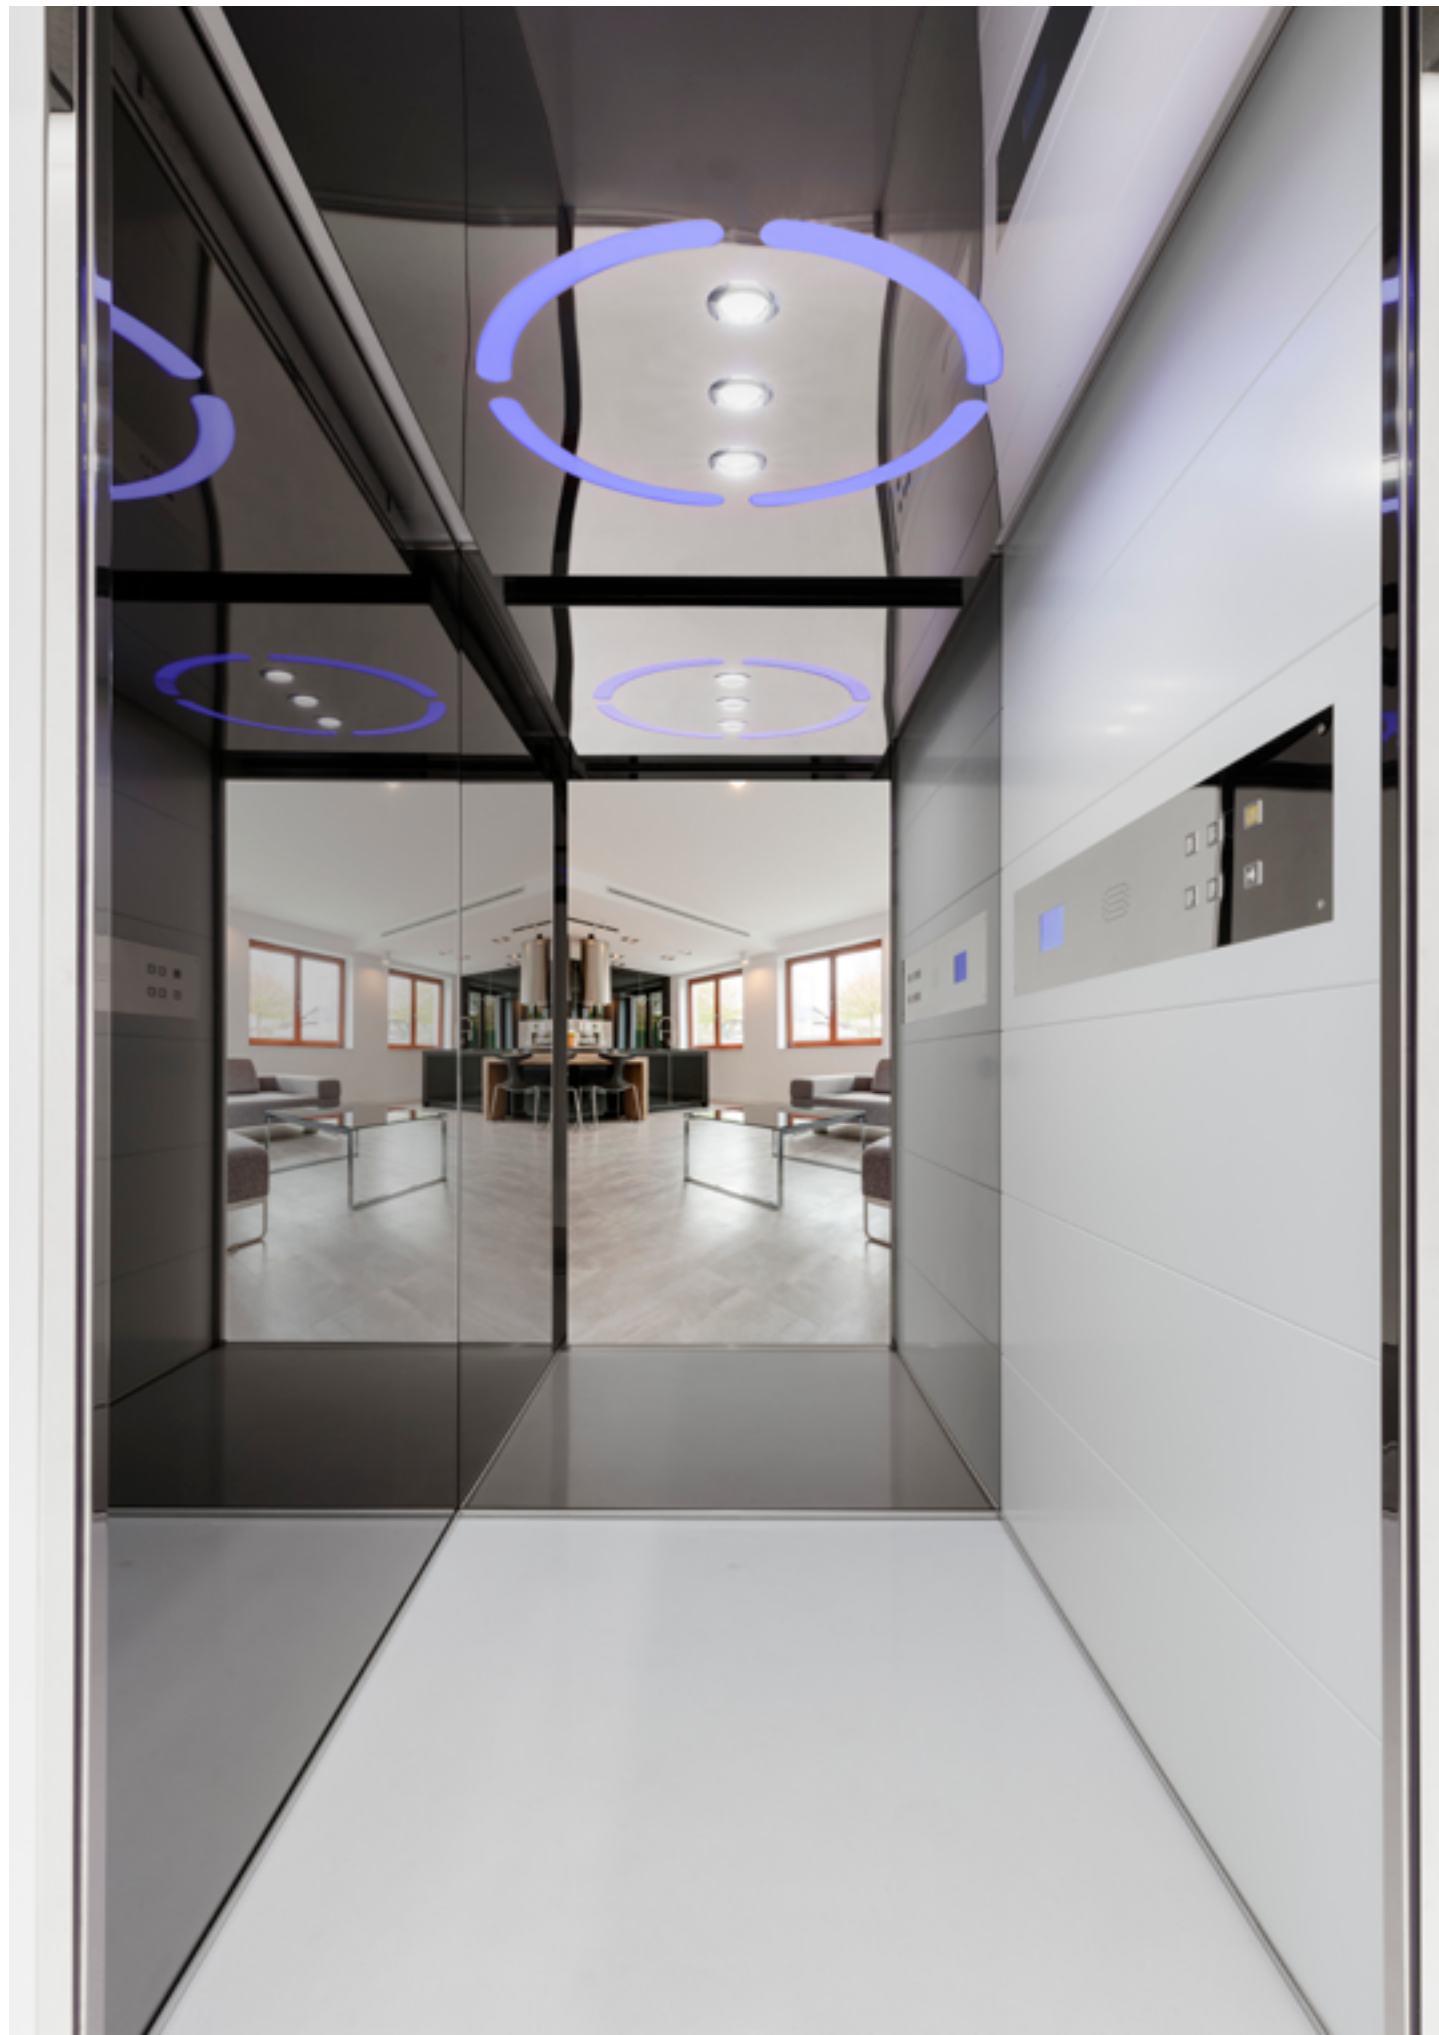

CMA lifts accessories are designed to meet the diverse needs of users, and

adapt to different types of buildings: from satin or polished steel handrails and fully customizable false ceilings to marble floors or parquet choices.

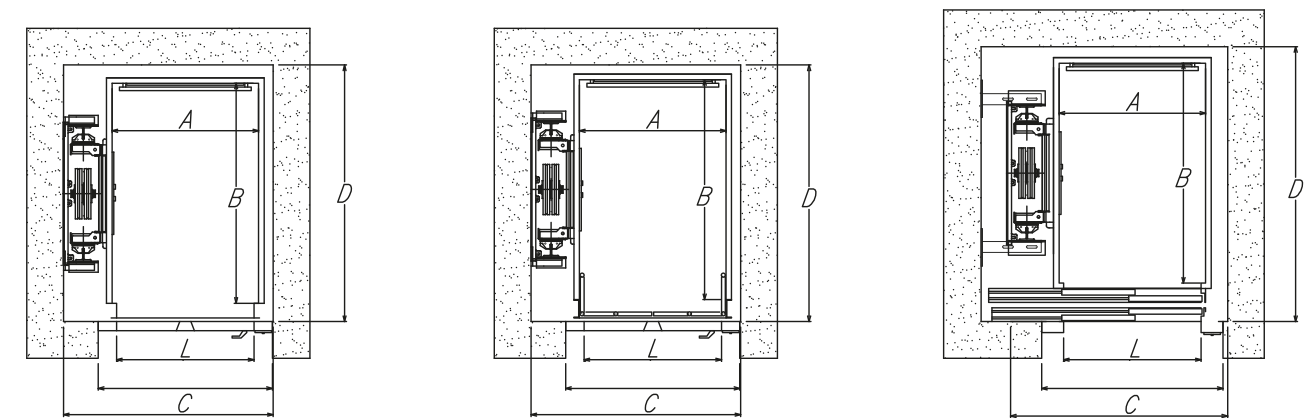

Particular attention is paid to doors (automatic, semi-automatic or double-shutter) and cladding options (wood, laminate, steel or stone).

Each material becomes a new opportunity to design a unique model. Unique exactly like yourself!

CMAlifts, set up in 2001 with a far sighted vision by the brothers Giulio and Gaetano Caputo, is today a leading international company in the design, manufacturing and assembly of lifts and elevators for private and industrial use.

It is a company that has preserved a craftsmanship heart, combining futuristic high-tech solutions with the inventiveness of its employees.

CMAlifts' target market knows no boundaries. Deeply rooted in the Italian market, CMAlifts is also a protagonist in the Balkans and Northern Europe. Thanks to an increasingly widespread sectorial trade fair attendance, clients' orders from abroad have multiplied as time has gone by.

Standing strong with extensive experience, CMAlifts carefully and professionally handles all technical and design demands. The company's work method is based on the principles of professionalism and reliability, which characterize all phases from planning to production, from order management to on site delivery. No aspect of the business is handed over to external workforce (including logistics).
